Pupil Non-discrimination-Counseling

How are the district's equity policies and practices incorporated into counseling?

The Brillion Public School Policy states: Brillion Public Schools shall not discriminate on the basis of gender, race, national origin, ancestry, creed, age, sexual orientation, pregnancy, marital or parental status, or physical/mental/emotional/learning disability in its educational programs, activities, or employment. With regard to personal counseling, to not discriminate by definition would be to not incorporate any special policy or frequency into the counseling environment. Students with relatively unique characteristics are treated the same as all students in the student body. As identified needs arise or are perceived by the counselor or any staff member or student, the student with the identified need will then be met on an individual basis. In addition, all efforts are made to help connect the individual with the unique characteristic or situation to outside resources as necessary. (i.e. connecting a pregnant teenager with the county nurse, soliciting assistance from the ESL teacher for FAFSA completion for English Language Learners)

With regard to the counseling program, the concepts of understanding and accepting others and appreciating diversity are central to the classroom component of the counseling program. Students learn to better understand other individuals with unique characteristics and are encouraged to identify with the strengths and positive traits of each individual. These concepts have been formally in place for over a decade at the elementary and middle school levels and are now also addressed in a formal fashion through the classroom character education at the high school level.

To what degree are the following student background issues considered in counseling?

Primary language background including dialects of English

Brillion Public Schools has approximately a six per cent minority population. This particular dynamic shows up occasionally with Hispanic students or foreign exchange student. Counselors use family feedback as well as consultations with the ELL teacher as necessary. Our current Spanish teacher works in at the county level with the Hispanic population so she can also be utilized as a valuable resource. We occasionally will ask our ESL teacher to collaborate with family members on FAFSA completion as finances tend to be a large part of post-secondary decision making.

Cultural background

Brillion Public Schools has approximately a six per cent minority population. Counselors use family feedback as well as consultations with the ELL teacher as necessary. Our current Spanish teacher works in at the county level with the Hispanic population so she can also be utilized as a valuable resource. Counselors provide individual and/or small group counseling to help students adapt to the social/school environment. Counselors keep an awareness and respect of students' cultural values. Counselors are currently working on getting a better understanding of poverty and the unspoken rules of the economically disadvantaged population as outline by acclaimed author Ruby Payne.

Gender

There is no way to counsel on an individual basis and not take into account gender differences. This is true at all levels and seems to become more pronounced in grades 5-10. Unique dynamics dealing with gender, especially friendships are dealt with regularly on group and individual level. Sometimes books serve as good references both for the school counselors and the students experiencing issues. Some examples of these publications include *Odd Girl Out*, *Queen Bees and Wannabes*, *Girl Wars*, *The Purpose of Boys* and *Raising Real Men*, *Lost at School*.

Race

Brillion Public Schools has approximately a six per cent minority population. Counselors use family feedback as well as consultations with the ELL teacher as necessary. Our current ELL teacher works in at the county level with the Hispanic population and personally knows almost every Hispanic family in the district so she can also be utilized as a valuable resource. Counselors provide individual and group counseling to help students adapt to the social/school environment. Counselors keep an awareness and respect of students' cultural values.

Sexual orientation

Sexual orientation is somewhat more challenging in counseling than some of the other issues in that it requires self disclosure in order to deal with any related issues. Disclosure is more common than it was 10 years ago, but it is still not the norm, especially with teenage boys. In any event, issues dealing with non-traditional sexual orientation are dealt with in group and individual settings on an as-needed basis. Counseling is done in a nonjudgmental and supportive manner and harassment, as it arises is not tolerated and is dealt with by school officials on a case by case basis.

Disability

Certain types of disabilities come up topically in the classroom portion of the counseling program. With regard to individual counseling, each counselee is dealt with as an individual and any particular disability is considered in the same realm any other unique feature of the counselee is considered. The counselors do sometimes have an advantage when counseling students with disabilities in that often the special education teachers have a close knit relationship with the students and thus can be very valuable informational resources. Upon reflection, we feel we may be able to improve in a few areas in terms of better meeting the needs of students with disabilities. We need to be more sensitive to the possibility of a student's disability overshadowing counseling needs. We also need to find ways to help create a student environment that is more accepting of our special education students.

What opportunities are available for students to explore new, nontraditional career, or higher wage opportunities?

We need to start by commenting that we are in an ever changing economy and demands and wages that exist today may be quite different by the time a student begins employment. That being said, we try to give every opportunity for students to explore non-traditional occupational areas and gain exposure to new careers as well as those that currently have high wages.

With regard to non-traditional careers, we often receive and disseminate information on non-traditional careers for females, the most common of which is women in engineering. We have generally had higher than average

percentage of females enroll in our technology and engineering courses and have received significant publicity for our female team that has worked in our High Mileage Vehicle program the past two years. We also are well represented by females in our construction courses. Unfortunately, while there is significant promotion involved in recruiting females into non-traditional fields, the reverse is not true. We feel there is very little formal promotion from either higher education or the world of work encouraging young men to enter nontraditional fields such as nursing or early childhood education.

Providing information on new careers is an ongoing process and we benefit by the local technical schools that reach out to us in that regard. We will be having a presentation on traditionally male apprenticeships this week and we expect to have about 35 females in attendance.

We feel we do a very good job getting current information out regarding the job market and wages. Students utilize the Wiscareers program formally in 6th, 7th, 8th and 10th grade and have access to the program throughout their school years. One of the first things students explore when they use these programs is the yearly salaries associated with a given occupation. We also produce a unique technical college graduate placement report and give it to all students considering technical college careers. In both of the past two years, we have had minority students enroll in relatively unknown high paying technical college majors.

Beyond Wiscareers and our custom graduate employment reports, we utilize Jobnet, Occupational Outlook Handbook, Wi Career Pathways and Career Cruising. Thorough graduate employment reports are readily available from all local technical colleges and from a good percentage of four year universities. Graduate employment information is analyzed for quality and is often referenced, explained and given out on an individual level during planning conferences.

Review all the materials used in counseling and assess for bias and stereotyping.

The materials used in our counseling program were assessed for bias and stereotyping at all three levels; elementary, middle, and high school. Each member of the counseling team assessed their respective grade levels and the counselors met to discuss the findings of those assessments.

Develop an action plan to address areas needing improvement as revealed by the self-assessment.

We feel very strongly that equity and equality of opportunity are important components of any counseling program. In fact, the most important characteristics of counseling are acceptance, empathy and to a high extent, a non-judgmental attitude. Those very attributes come close to defining the term non-discrimination. That being said, the Brillion Public Schools counseling team has identified the following areas of focus as we go forward in an attempt to promote equity and equality of opportunity to the highest extent possible:

- Increase communication and collaboration with special education teachers in regards to addressing the counseling needs of students disabilities. Set up regular meetings to touch bases with special education teachers. Communicate regularly with classroom teachers on students.
- Expand counselors' knowledge on different emotional and behavioral disabilities and counseling methods for students. Seek out information via books, articles, internet, and workshops current information on different disabilities.
- Connect special education students with regular education students through small groups, activities, and events.

- Educate students in regards to individual unique differences and disabilities (ex: students on the autism spectrum).
- Meet consistently with regular education teachers and special education teachers throughout the school year to collaborate about individual student needs.
- Annual field trips will be offered to a local area technical college. These field trips will be specific to special education and ELL students.
- The counselor will work in concert with the technical education staff to continue to promote nontraditional fields for females.
- An effort will be made to promote male enrollment in Health Care Careers class as well as Working with Young Children.
- Efforts will be made to increase post-secondary enrollment for economically disadvantaged students.
- Counselors have formed a book study group to better understand and meet the needs of students experiencing poverty in their lives.
- The high school had initiated an organization called Club Unity to promote the appreciation of diverse and unique individual characteristics.
